Correction to Ilukor, et al. (2025)

In the report “SPIA Uganda Report 2025: Agricultural Diversity Under Stress” by John Ilukor, Emmanuel Letaa, Amit Khanal, Julio Barros, Lemi Taye, Davis Gimode, Giulia Ponzini, Godfrey Asea, Vincent Ssennono, James Stevenson, Travis Lybbert, Karen Macours, 2025, there was an error in Figure 3, Tables 17, 22, 44, 52, 53, 54 and 55, and page 59. In Figure 3 should have been a blue-colored map showing *“Share of livestock farmers, Uganda, by sub-region (2009–2019)”*. Table 17 was missing a footnote, missing the 2006 value row, value row for 2012 should have been 79, value for the overall mean should have been 2007. Table 22 was mislabeled as table 19, now corrected *“Table 22: Recycling of maize seed (subjective data, rows) for maize variety samples (DNA fingerprinting data, columns)”*. Table 44 was mislabeled as table 40, now corrected *“Table 44: Sample-level subjective data (rows) for groundnut samples found using genotyping to be CGIAR-related, assigned but not CGIAR-related, or unassigned (columns)”*. Tables 52–55 should have had only one row labeled as “unassigned”. Page 59 text should have been *“Table 17 shows the average year of release as a share of samples to be 2007, which implies that the average age of improved varieties on farmers’ fields was 15 years (i.e., maize found on farmers’ fields was on average released 15 years earlier).”*
